

Produced in Montreal (Quebec), the vegan soy wax candle is poured into a blown glass container and worked by hand, which gives it its unique character.

Composed of natural aromatic essence, the candle purifies the ambient air by burning and diffuses a delicate odor while generating no toxic substance during combustion.

In addition, as it liquefies, the soy wax descends evenly and allows optimal use of the candle.

It is recommended to light the candle for a maximum of 3 hours at a time. Then blow it out, let it cool completely (wax and blown glass container) before light it back again.

Once the candle has cooled, cut the cotton wick where it begins to darken or simply remove the black part from the end.

Be careful of the risk of burns! The blown glass container is hot when the candle is lit and until the candle has cooled completely. Soy wax becomes liquid when hot. Do not handle the candle while it is lit and burn it in a safe place. Never leave a burning candle unsupervised.

What to do when the candle is finished?

Once the candle wax is used up, remove the cotton wick and metal holder. Clean the blown glass container with lukewarm water and liquid dish soap. Do not use boiling water; this could cause the blown glass container to crack.

Once the container is well cleaned and dry, reuse it as you wish! It makes a charming pot for miniature plants or it can be very practical for storing your jewelry. It can also simply be used as a candle holder or pour new soy wax into it. Be creative!
